

THE SHARED FAILURE

01

Career potential is lost when evidence and action arrive too late.

CareerOS connects student evidence, employer demand, and university action so gaps can be addressed earlier.

AI-POWERED CAREER OS**Student evidence****Employer demand****University action**

DEMONSTRATED PROTOTYPE · SIMULATED INTELLIGENCE AND DATA

Talentbank AI Hackathon · July 2026

The same evidence gap appears as uncertainty, recruiting waste, and late institutional action.

01**STUDENT**

Chris, a Year 3 Data Science student, has real projects but weak proof of what they demonstrate—or what to do next.

02**EMPLOYER**

A recruiter needs talent now, while prior challenge participants and screening context have gone cold.

03**UNIVERSITY**

A programme team sees an MLOps or readiness gap while the current cohort cannot wait for a curriculum cycle.

Different symptoms. One structural failure: useful signals are fragmented, weakly evidenced, and remembered too late.

Existing tools optimise transactions, not continuity.

CareerOS preserves the context between transactions—it does not try to replace every system.

CareerOS turns fragmented signals into a shared sequence of decisions.

The prototype demonstrates each workspace; a live cross-organisation learning network remains future-facing.

Career Memory turns “I did this” into “Here is what it proves—and what is missing.”

Chris Lee · Year 3 · Bachelor of Data Science · Taylor's University

- 1 Preserve projects, internships, leadership and achievements.
- 2 Connect each experience to skills and supporting evidence.
- 3 Expose missing proof instead of hiding uncertainty.

Behaviour change: maintain reusable evidence continuously—not only when applying.

DEMONSTRATED UI · EXTRACTION / VERIFICATION PARTIAL

The Data Science degree becomes a starting signal—not a career boundary.

- 1 Interpret existing evidence against possible paths.
- 2 Reveal adjacent roles and transferable evidence.
- 3 Prioritise the next missing skill or proof.

Career browsing becomes one evidence-building next step.

Guidance only creates value when it ends in an action.

- 1 Explain why an opportunity fits—and what is missing.
- 2 Save, prepare or apply from the same context.
- 3 Preserve the application stage and next action.

Advice becomes a visible commitment and follow-up state.

Ask from intent, then practise the moment that matters.

COMPANION

Interprets intent and routes the student to relevant CareerOS context.

PRACTICE

Creates repeatable interview preparation around a role and company.

The student moves from uncertainty to a specific preparation task without learning the product's information architecture.

CareerOS gives students reasons to return between applications.

- 1 Community normalises rejection, doubt and skill gaps.
- 2 Mentorship or learning offers targeted support.
- 3 New activity can become future Career Memory evidence.

Support and evidence-building continue between vacancies.

Employers need evidence and history—not another candidate database.

Ask what supports fit and what must be validated—not merely whether a CV looks right.

CURRENT CANDIDATES, SCORES AND HISTORIES ARE DEMO DATA

A match should explain the evidence—and the uncertainty.

- 1 Start from a specific hiring need.
- 2 Surface candidates with contextual evidence.
- 3 Expose strengths, gaps and a validation question.

Shortlist with an explicit rationale and validation plan.

A candidate profile becomes a decision brief, not a digital CV.

- 1 Compare fit evidence, source and recency.
- 2 See what is strong, missing or still uncertain.
- 3 Carry the rationale into the next hiring step.

Review becomes faster to explain and easier to challenge.

DEMONSTRATED UI · DATA AND SCORES ILLUSTRATIVE

Every engagement can become reusable talent intelligence.

- 1 Preserve challenge, event and screening history.
- 2 Move candidates through an explicit pipeline.
- 3 Re-engage warm talent instead of restarting sourcing.

Relationships compound across hiring moments.

DEMONSTRATED LOCAL PIPELINE · LIVE CRM / ATS INTEGRATION FUTURE

Universities need signals early enough to change the current cohort's trajectory.

01**READINESS**

Which students or programmes need attention now?

02**MARKET ALIGNMENT**

Where are employer expectations moving faster than curriculum?

03**EVIDENCE**

Can interventions, partnerships and accreditation proof be reused?

CareerOS converts fragmented outcomes into governed intervention workflows.

INSTITUTIONAL METRICS AND CASES ARE DEMO DATA

Readiness insight should trigger an intervention—not another report.

- 1 Identify programme and cohort gaps.
- 2 Trace the signal to affected students or skills.
- 3 Assign and track a targeted intervention.

Act while the cohort can still benefit.

Curriculum-market alignment becomes a living prioritisation workflow.

- 1 Compare curriculum coverage with demand signals.
- 2 See where gaps are emerging by programme.
- 3 Prioritise a response without claiming predictive certainty.

Programme teams can discuss one evidenced priority sooner.

Alumni and collaboration signals can shorten the distance from insight to partnership.

- 1 Use alumni outcomes as directional evidence.
- 2 Translate an identified gap into a collaboration brief.
- 3 Preserve partner context for future decisions.

Partnership development starts from an explicit capability need.

Accreditation evidence should be assembled continuously—not reconstructed under deadline.

- 1 Organise outcomes, activities and supporting artefacts.
- 2 Link evidence to standards and review tasks.
- 3 Keep progress and ownership visible.

Institutional memory becomes reusable and auditable.

The AI Office turns signals into governed institutional action.

- 1 Coordinate cross-department operating rooms.
- 2 Align decisions with university priorities.
- 3 Track intervention ownership, progress and evidence.

AI supports decision preparation; humans retain governance.

DEMONSTRATED UI · AI RECOMMENDATIONS AND OPERATIONS SIMULATED

Three workspaces create one compounding evidence loop.

CareerOS is more than a portal or dashboard because each decision can preserve context for the next stakeholder.

The prototype is broad; its intelligence and network effects are not yet proven.

01**DEMONSTRATED**

Three workspaces
Editable interactions
Local workflows
Rich prototype states

02**SIMULATED / PARTIAL**

Candidate and market data
Recommendations and scoring
Optional model responses
Selected backend paths

03**FUTURE-FACING**

Live integrations
Cross-organisation memory
Validated accuracy / fairness
Production governance

No adoption, customers, partnerships, measured outcomes, ROI or AI accuracy are claimed.

CareerOS could extend Talentbank from moments of engagement into a lifecycle of evidence and action.

01

STUDENT VALUE

More continuous reasons to engage, prepare and build proof.

02

EMPLOYER VALUE

Richer context before and after hiring campaigns or events.

03

UNIVERSITY VALUE

A workflow layer for readiness, collaboration and evidence reuse.

Strategic value is a hypothesis: it depends on consent, trust, integrations, buyer demand and operational ownership.

STRATEGIC FIT TO VALIDATE · NOT AN EXISTING PARTNERSHIP

The next step is to prove one consented evidence-to-action loop.

Validate workflow value before scaling intelligence, integrations or network claims.

Remember the signal. Act before potential is lost.

CareerOS is an evidence-memory and action layer connecting students, employers and universities.

01

WHAT EXISTS

A polished, editable multi-workspace prototype.

02

WHAT IT TESTS

Whether preserved context improves the next decision.

03

WHAT COMES NEXT

A bounded pilot with consent, measurable behaviours and explicit governance.

CareerOS — AI-powered career operating system
