

CareerOS

The career operating system that turns potential into evidence—and evidence into action.

Connecting students, employers and universities before
opportunities, talent and interventions are lost.

STUDENTS · EMPLOYERS · UNIVERSITIES

Four chapters. One evidence-to-action story.

01

THE BREAKDOWN

Why today's career ecosystem fails

02

EVERY STAKEHOLDER

Student, employer and university transformation

03

THE COMPOUNDING ECOSYSTEM

How one signal creates value across the network

04

THE ROAD AHEAD

Future vision, technology and closing

01 — THE BREAKDOWN

Today's tools solve transactions—not the journey.

— Each system sees one moment. None of them remembers the full journey.

02A — CANDIDATE

Students do not lack potential. They lack proof, direction and timely feedback.

01

EXPERIENCE ≠ PROOF

Projects, activities and internships are scattered. Students struggle to explain what those experiences demonstrate.

02

THE GAP APPEARS AFTER REJECTION

No diagnosis reveals whether the issue was skill, evidence, communication or career fit.

03

THE DEGREE BECOMES A BOUNDARY

Students see only obvious roles and assume changing direction means starting again.

The result: random learning, mass applications and loss of confidence.

CareerOS gives every student a living career intelligence system.

— One connected journey turns uncertainty into a ranked next action.

From career anxiety to visible progress.

BEFORE CAREEROS

“I do not know what my experience proves.”

“My degree limits my options.”

“I keep applying without knowing what is wrong.”

“A rejection makes me stop.”

WITH CAREEROS

“I have evidence of what I can do.”

“I can see adjacent paths and bridge skills.”

“I know which weakness to improve next.”

“A rejection becomes a diagnosable next step.”

Useful before, during and after the job application.

02B — EMPLOYER

Employers keep paying to rediscover talent they have already seen.

01

EVERY VACANCY BECOMES A COLD SEARCH

Urgent roles reopen job boards and restart screening from zero.

02

PROMISING TALENT DISAPPEARS

Event, challenge and interview context decays inside spreadsheets and inboxes.

03

CV CLAIMS LOOK IDENTICAL

Recruiters cannot see what was demonstrated—or what still requires validation.

The result: slower hiring, repeated acquisition cost and low confidence.

02B — EMPLOYER

CareerOS turns every talent interaction into reusable hiring intelligence.

— The employer product is a memory loop—not candidate browsing.

Stop recruiting from zero.

01

FASTER ACCESS TO CREDIBLE TALENT

Begin with people and evidence already known to the organisation.

02

HIGHER-CONFIDENCE SCREENING

See why a candidate fits and the exact questions still requiring validation.

03

MORE VALUABLE CAMPUS INVESTMENT

Challenges and workshops create observable signals—not only attendance.

Every recruitment process becomes an asset for the next one.

Universities are accountable for outcomes—but see the warning signs too late.

01

GOOD GRADES CAN HIDE CAREER RISK

Academic performance may coexist with weak exposure, evidence and employability activity.

02

MARKET DEMAND MOVES FASTER

The current cohort cannot wait for the next curriculum approval cycle.

03

EVIDENCE CANNOT BE ASSEMBLED

Readiness, alumni and partnership proof stays fragmented until a deadline.

— The result: responsibility without the operational capacity to act early.

CareerOS turns graduate employability into a continuous operating process.

— The AI Office prepares decisions while humans retain authority.

Act before the gap becomes a graduate outcome.

01

EARLIER INTERVENTION

Identify employability risk before it appears in destination reports.

02

HELP THE CURRENT COHORT NOW

Launch targeted interventions while formal curriculum reform continues.

03

CLEAR OWNERSHIP

Convert recommendations into named actions, deadlines and follow-through.

04

CONTINUOUS READINESS

Reuse operational evidence across accreditation and internal review.

Move from reporting what happened to managing what happens next.

03 — THE COMPOUNDING ECOSYSTEM

One signal creates value across the entire ecosystem.

01

University detects a cloud-skill gap

02

Employer launches a targeted challenge

03

Students demonstrate applied ability

04

Results become Career Memory evidence

05

Employers shortlist high-signal talent

06

University measures and reuses outcomes

— CareerOS connects the evidence required by the next decision.

The ecosystem becomes more valuable every time it is used.

STUDENTS

Experiences accumulate into a portable career story.

EMPLOYERS

Events and decisions accumulate into warm talent history.

UNIVERSITIES

Interventions and outcomes accumulate into institutional intelligence.

TALENTBANK

The relationship can extend beyond one listing or application cycle.

Transactions disappear. Relationships and evidence remain.

04 — THE ROAD AHEAD

From career platform to national talent intelligence infrastructure.

TODAY**CONNECTED WORKSPACES**

Student, employer and university workflows with shared product logic.

NEXT**VERIFIED EVIDENCE NETWORK**

Permissioned evidence, provenance, integrations and outcome tracking.

FUTURE**HUMAN-GOVERNED INTELLIGENCE**

AI monitors signals and prepares interventions while people retain authority.

— The advantage is trusted longitudinal context—not simply a larger model.

Built as a modular, AI-ready ecosystem.

EXPERIENCE**React · Vite · Tailwind CSS**

Role-based student, employer and university workspaces

INTELLIGENCE**LLM interaction patterns**

Contextual recommendations and specialist routing

WORKFLOW**State · handoffs · controls**

Evidence handoffs, interventions and decision controls

BACKEND**FastAPI services**

Extensible API architecture

— Current prototype: rich frontend workflows, local simulations, optional model calls and a partial backend.

Potential should not be lost because the system remembered too late.

CareerOS preserves what students can do, helps employers recognise who to trust, and enables universities to act before gaps become outcomes.

Remember the signal. Prove it. Act earlier.

The evidence memory and action layer between education and employment.
